

Remote Work Policy

Enterprise Knowledge Assistant — Sample Knowledge Base

1. Purpose

This policy defines the requirements and expectations for employees who work remotely or through an approved hybrid arrangement.

2. Eligibility

Employees who have completed probation may request remote work, subject to role requirements, team needs, manager approval, and applicable company procedures.

3. Approval Process

Employees must submit a remote-work request through the designated process. Approval may depend on job responsibilities, performance, business continuity, team coordination, and security requirements.

4. Working Hours

Standard remote working hours are 9:30 AM to 6:00 PM, Monday through Friday, unless a different schedule has been approved. Employees must remain reachable during their scheduled hours.

5. Availability

Remote employees should remain available through approved communication tools and attend required meetings. Employees should notify their manager when they will be temporarily unavailable during working hours.

6. Work Location

Employees should work from an appropriate and secure location that allows them to perform their duties effectively. Employees should inform their manager before working from a different location for an extended period.

7. Company Equipment

The company may provide a laptop, monitor, accessories, or other equipment required for remote work. Employees must take reasonable care of company property and report damage or loss promptly.

8. Internet and Utilities

Employees are responsible for maintaining a reliable internet connection and suitable workspace unless the company has approved a specific reimbursement or support arrangement.

9. Information Security

Employees must use approved devices, authentication methods, and security controls when accessing company systems. Confidential information must not be exposed to unauthorized persons.

10. Public Networks

Employees should avoid accessing sensitive company systems through unsecured public Wi-Fi. When public networks must be used, employees should follow the company's approved security controls.

11. Data Protection

Company files should be stored only in approved systems. Employees must not upload confidential company or customer information to personal cloud storage, unauthorized applications, or consumer file-sharing services.

12. Meetings and Collaboration

Remote employees are expected to participate in meetings, collaboration sessions, and team communication using approved tools. Cameras may be used when required for effective collaboration.

13. Performance Expectations

Remote work does not change performance expectations. Employees are responsible for completing assigned work, meeting deadlines, communicating progress, and maintaining expected quality standards.

14. Attendance

Employees working remotely must follow the company's attendance requirements. Repeated unavailability, unexplained absences, or failure to meet agreed working hours may result in a review of the remote-work arrangement.

15. Working From Another Country

Employees must obtain prior approval before working from another country because tax, employment, security, and regulatory requirements may apply.

16. Visitors and Shared Spaces

Employees should take reasonable precautions to prevent visitors or other people in shared spaces from viewing confidential company information or accessing company devices.

17. Printing and Physical Documents

Employees should avoid unnecessary printing of confidential information. Printed company documents must be stored securely and disposed of using an appropriate method.

18. Health and Safety

Employees should maintain a safe and suitable workspace. Any work-related injury or safety concern should be reported through the appropriate company process.

19. Equipment Return

When employment ends or a remote-work arrangement changes, employees must return company equipment and any physical company materials according to company instructions.

20. Policy Review

The company may review and update this policy as technology, security requirements, business needs, or applicable regulations change.
